

A Better Way to Do Business.

Speakeasy Business VoIP combines broadband connectivity, local and long distance phone service, PBX functionality, and conferencing to deliver a complete communications package that saves time and money while helping you compete like never before. **What can VoIP do for your business?**

Find Me, Follow Me

Increase staff productivity and complement wireless service by enabling staff to forward calls to mobile phones, second office lines, home lines, and/or other phones. Calls can ring simultaneously or sequentially to as many as five phones. Users can maintain privacy by keeping mobile/home numbers private and selectively accepting or rejecting calls from specific numbers.

Voicemail as Email

Receive voicemail messages via email as .wav file attachments. Forward or save these files to eliminate restatement of messages, prevent mistakes, and create a record of important information.

Call from Anywhere

The Remote Office feature extends the rich set of business line services to any location with a broadband connection. Employees can place calls from remote phones while showing the business line on Caller ID and billing calls back to the office.

Web Interface

Our intuitive web interface supports the intense dynamics of consulting firms. Individuals can update their call routing or features in real-time, and change multiple settings with a single click.

Simplified Conferencing

Deliver more effective sales presentations, improve team productivity, and limit travel. Moderators can present with MS Excel, Word, and PowerPoint files, use a web-based GUI to record proceedings, and even mute/drop callers.

Effective voice communications are critical for consultants. Speakeasy Business VoIP supports every phase of consulting projects, in many ways surpassing the capabilities of traditional PBX phone systems. Advanced VoIP features enable consultants to improve mobility, client support, and team productivity.

Boost Efficiency. Stay Responsive.

Client satisfaction is critical. Speakeasy Business VoIP provides the client sponsor with priority access to account managers or partners. Attendant services and call center features ensure that general client issues are quickly routed to appropriate staff for resolution. These features reduce account management issues and can speed project completion.

Wireless service is the primary means of connecting remote or traveling consultants, but is typically separate from fixed line service. Multiple contact numbers create confusion and increase the likelihood of missed calls and unresolved issues. Speakeasy eliminates these difficulties with easy-to-manage features including flexible call forwarding options and the ability to have calls ring simultaneously or sequentially to multiple phones.

Speakeasy Business VoIP also improves consultant productivity, driving more effective work with clients and among internal staff with features like on-demand conferencing and "click-to-dial."

Do More. Spend Less.

Although consulting firms vary in size and focus, most recognize the benefits of deploying leading communications technology. Accustomed to paying early-adopter premiums, consulting firms are often surprised that Speakeasy Business VoIP delivers savings in addition to so many new capabilities. Your firm could save as much as 30% or more, while simplifying management with hosted functionality and one provider for voice and broadband.
