

A Better Way to Do Business.

Speakeasy Business VoIP combines broadband connectivity, local and long distance phone service, PBX functionality, and conferencing to deliver a complete communications package that saves time and money while helping you compete like never before. **What can VoIP do for your business?**

One Number

Speakeasy Business VoIP enables as many as five additional phones to ring along with an employee's work line. Eliminate the confusion of juggling mobile, home, and second office lines. Ensure key staff are always available and keep mobile and home telephone numbers private. Users can even selectively accept or reject calls originating from specific numbers.

Work from Anywhere

The Remote Office feature can extend your VoIP services to any location with a broadband connection. Employees can place calls from remote phones while showing the business line on Caller ID and billing calls back to the office.

Voicemail as Email

The Voicemail as Email feature, also known as Unified Messaging, forwards voicemail messages as .wav file email attachments. Send or save these emails to eliminate restatement of messages, prevent mistakes, and create a record of important information.

Coordinate Multiple Offices

Enjoy a single voicemail system, call forwarding between sites, and a convenient private dial plan. Setup Auto Attendants that direct calls between sites to leverage employee expertise.

Easy to Learn & Use

Our intuitive web interface enables staff to update call routing and feature configuration in real-time and change multiple settings with a single click.

Effective communications are critical in real estate. Agents, mortgage brokers, and contract attorneys must be available and responsive. Speakeasy Business VoIP gives real estate professionals and staff powerful tools to accelerate deal closure and drive new revenue opportunities.

Speakeasy Business VoIP service delivers results through a suite of innovative and enhanced voice services that support activities in the office and the field. More importantly, Speakeasy services can improve interaction between the office and field for more productive overall branch operations.

Features that Drive Success

Real estate transactions involve many moving parts, including buyers, sellers, agents, brokers, attorneys, and more. Between mobile phones and business lines, each individual often has multiple numbers, and communications are typically mixed between the field and the office. When deals so often hinge on a single phone call, real estate firms need voice services that meet their unique mix of requirements.

Traditional phone systems lack many of VoIP's advanced features, especially the ability to bridge mobile and office lines. Speakeasy Business VoIP offers a full range of web-configurable features that simplify communications, enabling staff to determine how, when, where, and to whom they are available.

Powerful Savings

Speakeasy Business VoIP eliminates equipment support and maintenance costs and reduces costs by providing both voice and data services over a single channel. It's so powerful and easy to manage that it will drive call volume back to the office line, reducing mobile expenses. You could save 30% or more on total communications costs while enjoying better service.
