

## A Better Way to Do Business.

Speakeasy Business VoIP combines broadband connectivity, local and long distance phone service, PBX functionality, and conferencing to deliver a complete communications package that saves time and money while helping you compete like never before. **What can VoIP do for your business?**

### Coordinate Multiple Locations

With Speakeasy Business VoIP, your business can have a single voicemail system, free 4-digit dialing, and call forwarding between sites. Set up Auto Attendants to direct calls between sites to leverage employee expertise.

### Easy to Learn and Use

Our intuitive web interface enables administrators to update call routing and feature configuration in real-time from any location. The system is seamless to end users, and multiple training options are available to bring employees up to speed on advanced features.

### Support Mobile Workers

With a wealth of call forwarding customization options, traveling employees can stay in touch with important contacts. In addition, the Remote Office feature can extend your VoIP services to any location with a broadband connection. Employees can place calls from remote phones while showing the business line on Caller ID and billing calls back to the office.

### Accuracy and Efficiency

Receive voicemail messages as audio file email attachments. Forward or save these files to eliminate restatement of messages, prevent mistakes, and create a record of important information.

### Click to Dial

Highlight any number in your web browser—or choose a number from an individual or company-wide address book—and simply click your mouse to dial the call.

*“Speakeasy Business VoIP offers tremendous flexibility and low capital costs on the introduction. You can buy toward the future rather than being simplistic in your thinking.”*

*- Barry Abraham, President/CEO, Capstone Granite*

Success in the retail industry depends on managing overhead and satisfying customers. Speakeasy Business VoIP delivers a robust communications package that costs less and scales effortlessly, plus advanced features that can improve both customer service and internal communications.

### Simplify and Save

With free 4-digit dialing between locations and unlimited calling plans available, Speakeasy Business VoIP can slash your long distance expenditures. Your start-up costs will be about 60% less than the cost of implementing a traditional phone system, and there are no maintenance costs. Even better, you'll enjoy one provider for all your voice and data service, one dedicated contact for support, and an intuitive web interface that enables you to administer the system from any location.

### Grow Intelligently

As a national provider, Speakeasy gives you the freedom to grow into other parts of the country without sacrificing the management simplicity and savings of working with just one provider.

If you have multiple locations with the same needs, we can design a unique “cookie cutter” configuration that's easy to replicate. Setting up voice and data service in a new store becomes as simple as one phone call to your Speakeasy point-of-contact.

If you choose Speakeasy VoIP for multiple locations, we'll work with you to develop a sensible migration path. Usually we roll out the new system in phases with overlapping cutover dates and an integrated training plan.
