SSL Web Server Certificates

[Secure SSL certificates with full authentication capable of 256-bit encryption]

The *thawte* SSL Web Server Certificate offers comprehensive authentication procedures (domain name *and* identity verification). It also offers 256, 128, 56 or 40-bit encryption depending on your client's browser capability and the cipher suite installed on your web server. This ensures that information is kept private between your web server and your clients' web browsers.

Certificate Features and Benefits:

SGC Technology:	No
Online Certificate Status Protocol:	Yes
CRL:	Yes - Certificate Revocation List fully supported

Is this product right for my business?

Your choice of digital certificate depends mainly on whether identity assurance to your customers is vital, and that your company details are added to the certificate contents. This facility comes standard with both the SSL Web Server Certificate and the SGC SuperCert after a stringent verification process. For absolute peace of mind that you are getting highest protection possible, a SGC SuperCert is always recommended.

Authentication procedures standard with a *thawte* SSL Web Server Certificate

- Company registration details are confirmed
- Confirmation that the domain is owned by said registered company, or that the company has the right to make changes to the domain.
- 3rd party confirms that the authorized person requesting certificate is employed by requesting party.
